

Dear Commissioner,
RE: Docket #'s OOP-1211/CPI and 99N-4282.

The Federal Food, Drug and Cosmetic Act requires mandatory labeling of foods that have undergone material changes. Since genetic engineered (GE) foods have undergone fundamental material changes, please require they be labeled. Please also require thorough premarket safety and environmental testings of these, since there is potential for causing ecological damages.

Be advised with GE plant foods containing an animal gene (chicken and fish thus far,) that lack of labeling of these will cause violations of religious freedom for religious vegetarians.

Sincerely,

Lawrence Smith
